

C4C 1 Computer Diagram

Notation Key:

In keyword represents input into component, and out represents output. A number in front details how many wires the input/output has. (Example: 21 Bus) On all bus connections (bus to component, including connector in some cases) the notation x In can be interchanged with $(x - 1) + P$ In. P is a symbol that stands for the Power wire to a unit.

This document diagrams the C4C 1 computer system, which was developed and successfully tested by Cool4Cool. The first successful run of the full computer system occurred on March 22, 2017. This diagram is only meant to be a block diagram of the general layout of the computer to show its overall design.
